

# KarTent Rocket

## WHAT'S IN THE BOX?

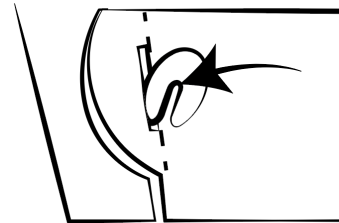

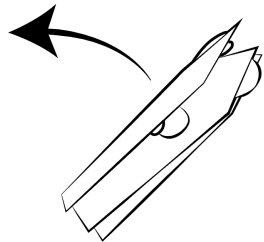

- 2x Rocket base A
- 1x Rocket body - door B
- 2x Rocket body - window C
- 2x Rocket body - closed D
- 10x Connector E

Tip: Prefold the fold lines!

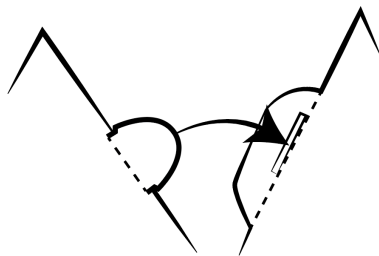

1. Check if you have all the parts. There are incisions halfway through the body parts, these are **not** used when setting up.

2. Make sure the incisions and folds **face you!** Place the body parts next to each other, in the order shown. Fasten the pieces together using the connectors as shown.

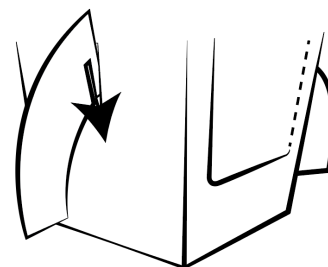

3. Stand the rocket upright so that it is pointing up. Then place it around so that the rocket takes shape.

4. Fasten the mounting at the back with 2 connectors. Ensure the remaining fasteners and cuts are on the inside of the rocket.

5. Fold the flaps at the top and fold them inwards all around. (5x)

6. Take the feet and insert them into the appropriate holes (2x). Your rocket is now finished!
