

# BAR STOOL

## WHAT'S IN THE BOX?

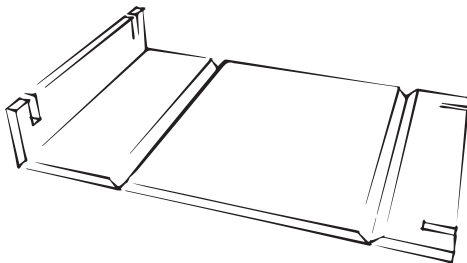

- 2x Sidewall A
- 2x Outside wall under B
- 2x Outside wall above C

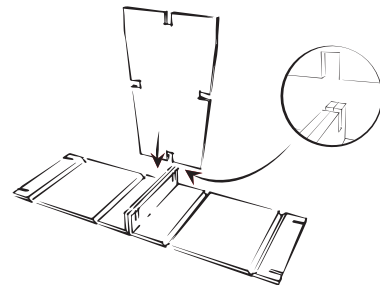

1. Check that you have all the parts.  
**(note: part B has 3 fold lines)**

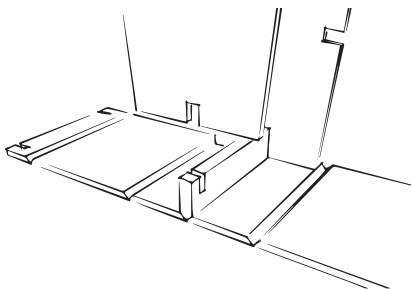

2. Remove the residual material that is at the folds and incisions, this can be removed by hand.

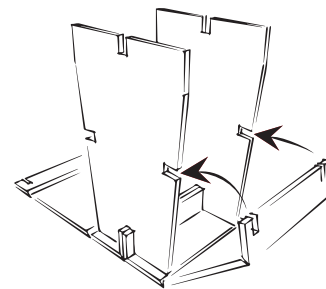

3. Take part B and fold up the end that is attached to the short center face. **(2x)**

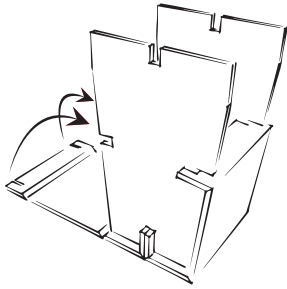

4. Take 1 part of A, slide it into the incision of both parts of B.

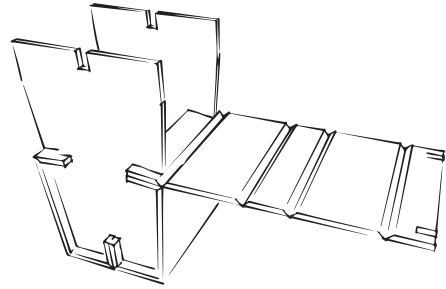

5. Now slide the other plate of A into both incisions of B.

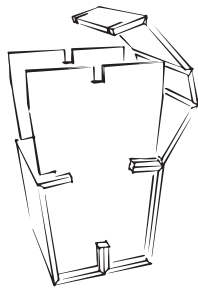

6. Fold the plate upwards and slide both incisions of B into the incisions of A.

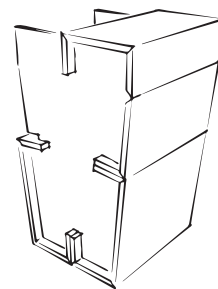

7. Now repeat the previous step but on the other side.

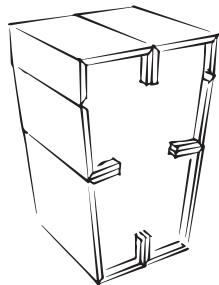

8. Now take 1 plate C and insert the incisions of C into the incisions of the plate A.

9. Now slowly fold C over the sides of A.

10. Hook the insedes of C at the top with the incisions of A.

11. Now repeat the last 3 steps but on the other side. And then you're all set to bar.
